

# Package ‘betaNB’

June 2, 2023

**Title** Bootstrap for Regression Effect Sizes

**Version** 1.0.1.9000

**Description** Generates nonparametric bootstrap confidence intervals (Efron & Tibshirani, 1993: <[doi:10.1201/9780429246593](https://doi.org/10.1201/9780429246593)>) for standardized regression coefficients (beta) and other effect sizes, including multiple correlation, semipartial correlations, improvement in R-squared, squared partial correlations, and differences in standardized regression coefficients, for models fitted by lm().

**URL** <https://github.com/jeksterslab/betaNB>,  
<https://jeksterslab.github.io/betaNB/>

**BugReports** <https://github.com/jeksterslab/betaNB/issues>

**License** MIT + file LICENSE

**Encoding** UTF-8

**LazyData** true

**Roxygen** list(markdown = TRUE)

**Depends** R (>= 3.5.0)

**Imports** stats

**Suggests** knitr, rmarkdown, testthat

**RoxygenNote** 7.2.3

**NeedsCompilation** no

**Author** Ivan Jacob Agaloos Pesigan [aut, cre, cph]

BetaNB	<i>Estimate Standardized Regression Coefficients and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping</i>
--------	---

---

**Description**

Estimate Standardized Regression Coefficients and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping

**Usage**

```
BetaNB(object, alpha = c(0.05, 0.01, 0.001))
```

**Arguments**

- object            Object of class nb, that is, the output of the NB() function.
- alpha            Numeric vector. Significance level  $\alpha$ .

**Details**

The vector of standardized regression coefficients ( $\hat{\beta}$ ) is estimated from bootstrap samples. Confidence intervals are generated by obtaining percentiles corresponding to  $100(1 - \alpha)\%$  from the generated sampling distribution of  $\hat{\beta}$ , where  $\alpha$  is the significance level.

**Value**

Returns an object of class betanb which is a list with the following elements:

- call** Function call.
- args** Function arguments.
- thetahatstar** Sampling distribution of  $\hat{\beta}$ .
- jackknife** Jackknife estimates.
- est** Vector of estimated  $\hat{\beta}$ .
- fun** Function used ("BetaNB").

**Author(s)**

Ivan Jacob Agaloos Pesigan

Other Beta Nonparametric Bootstrap Functions: [DeltaRSqNB\(\)](#), [DiffBetaNB\(\)](#), [NB\(\)](#), [PCorNB\(\)](#), [RSqNB\(\)](#), [SCorNB\(\)](#)

**Examples**

```
# Data -----
data("nas1982", package = "betanb")

# Fit Model in lm -----
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)

# NB -----
nb <- NB(
  object,
  R = 100, # use a large value e.g., 5000L for actual research
  seed = 0508
)

# BetaNB -----
out <- BetaNB(nb, alpha = 0.05)

## Methods -----
print(out)
summary(out)
coef(out)
vcov(out)
confint(out, level = 0.95)
```

---

coef.betanb

*Estimated Parameter Method for an Object of Class betanb*

---

**Description**

Estimated Parameter Method for an Object of Class betanb

**Usage**

```
## S3 method for class 'betanb'
coef(object, ...)
```

**Arguments**

`object`      Object of Class `betanb`, that is, the output of the `BetaNB()`, `RSqNB()`, `SCorNB()`, `DeltaRSqNB()`, `PCorNB()`, or `DiffBetaNB()` functions.

`...`      additional arguments.

**Value**

Returns a vector of estimated parameters.

**Author(s)**

Ivan Jacob Agaloos Pesigan

---

<code>confint.betanb</code>	<i>Confidence Intervals Method for an Object of Class <code>betanb</code></i>
-----------------------------	---

---

**Description**

Confidence Intervals Method for an Object of Class `betanb`

**Usage**

```
## S3 method for class 'betanb'
confint(object, parm = NULL, level = 0.95, type = "pc", ...)
```

**Arguments**

`object`      Object of Class `betanb`, that is, the output of the `BetaNB()`, `RSqNB()`, `SCorNB()`, `DeltaRSqNB()`, `PCorNB()`, or `DiffBetaNB()` functions.

`parm`      a specification of which parameters are to be given confidence intervals, either a vector of numbers or a vector of names. If missing, all parameters are considered.

`level`      the confidence level required.

`type`      Character string. Confidence interval type, that is, `type = "pc"` for percentile; `type = "bc"` for bias corrected; `type = "bca"` for bias corrected and accelerated.

`...`      additional arguments.

**Value**

Returns a matrix of confidence intervals.

**Author(s)**

Ivan Jacob Agaloos Pesigan

DeltaRSqNB

---

*Estimate Improvement in R-Squared and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping*

---

**Description**

Estimate Improvement in R-Squared and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping

**Usage**

```
DeltaRSqNB(object, alpha = c(0.05, 0.01, 0.001))
```

**Arguments**

<b>object</b>	Object of class nb, that is, the output of the NB() function.
<b>alpha</b>	Numeric vector. Significance level $\alpha$ .

**Details**

The vector of improvement in R-squared ( $\Delta R^2$ ) is estimated from bootstrap samples. Confidence intervals are generated by obtaining percentiles corresponding to  $100(1 - \alpha)\%$  from the generated sampling distribution of  $\Delta R^2$ , where  $\alpha$  is the significance level.

**Value**

Returns an object of class betanb which is a list with the following elements:

**call** Function call.

**args** Function arguments.

**thetahatstar** Sampling distribution of  $\Delta R^2$ .

**vcov** Sampling variance-covariance matrix of  $\Delta R^2$ .

**est** Vector of estimated  $\Delta R^2$ .

**fun** Function used ("DeltaRSqNB").

**Author(s)**

Ivan Jacob Agaloos Pesigan

**See Also**

DiffBetaNB

---

*Estimate Differences of Standardized Slopes and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping*

---

## Description

Estimate Differences of Standardized Slopes and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping

## Usage

```
DiffBetaNB(object, alpha = c(0.05, 0.01, 0.001))
```

## Arguments

object	Object of class nb, that is, the output of the NB() function.
alpha	Numeric vector. Significance level $\alpha$ .

## Details

The vector of differences of standardized regression slopes is estimated from bootstrap samples. Confidence intervals are generated by obtaining percentiles corresponding to  $100(1 - \alpha)\%$  from the generated sampling distribution of differences of standardized regression slopes, where  $\alpha$  is the significance level.

**Value**

Returns an object of class `betanb` which is a list with the following elements:

**call** Function call.

**args** Function arguments.

**thetahatstar** Sampling distribution of differences of standardized regression slopes.

**vcov** Sampling variance-covariance matrix of differences of standardized regression slopes.

**est** Vector of estimated differences of standardized regression slopes.

**fun** Function used ("DiffBetaNB").

**Author(s)**

nas1982

1982 National Academy of Sciences Doctoral Programs Data

---

### Description

1982 National Academy of Sciences Doctoral Programs Data

### Usage

nas1982

### Format

Ratings of 46 doctoral programs in psychology in the USA with the following variables:

**QUALITY** Program quality ratings.

**NFACUL** Number of faculty members in the program.

**NGRADS** Number of program graduates.

**PCTSUPP** Percentage of program graduates who received support.

**PCTGRT** Percent of faculty members holding research grants.

**NARTIC** Number of published articles attributed to program faculty member.

**PCTPUB** Percent of faculty with one or more published article.

### References

NB

---

*Generate the Sampling Distribution of Sample Covariances Using Nonparametric Bootstrapping*

---

### Description

Generate the Sampling Distribution of Sample Covariances Using Nonparametric Bootstrapping

### Usage

NB(object, R = 5000L, seed = NULL)

**Arguments**

<code>object</code>	Object of class <code>lm</code> .
<code>R</code>	Positive integer. Number of bootstrap replications.
<code>seed</code>	Integer. Seed number for reproducibility.

**Value**

Returns an object of class `nb` which is a list with the following elements:

**call** Function call.

**args** Function arguments.

**lm\_process** Processed `lm` object.

**thetahatstar** Sampling distribution of sample covariances.

**jackknife** Jackknife estimates.

**Author(s)**

Ivan Jacob Agaloos Pesigan

**References**

**Examples**

```
# Data -----
data("nas1982", package = "betaNB")

# Fit Model in lm -----
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)

# NB -----
nb <- NB(
  object,
  R = 100, # use a large value e.g., 20000L for actual research
  seed = 0508
)
nb
# The `nb` object can be passed as the first argument
# to the following functions
#   - BetaNB
#   - DeltaRSqNB
#   - DiffBetaNB
#   - PCorNB
```

```
# - RSqNB
# - SCorNB
```

PCorNB

*Estimate Squared Partial Correlation Coefficients and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping*

## Description

Estimate Squared Partial Correlation Coefficients and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping

## Usage

```
PCorNB(object, alpha = c(0.05, 0.01, 0.001))
```

## Arguments

**object** Object of class nb, that is, the output of the NB() function.  
**alpha** Numeric vector. Significance level  $\alpha$ .

## Details

The vector of squared partial correlation coefficients ( $r_p^2$ ) is estimated from bootstrap samples. Confidence intervals are generated by obtaining percentiles corresponding to  $100(1 - \alpha)\%$  from the generated sampling distribution of  $r_p^2$ , where  $\alpha$  is the significance level.

## Value

Returns an object of class betanb which is a list with the following elements:

**call** Function call.  
**args** Function arguments.  
**thetahatstar** Sampling distribution of  $r_p^2$ .  
**vcov** Sampling variance-covariance matrix of  $r_p^2$ .  
**est** Vector of estimated  $r_p^2$ .  
**fun** Function used ("PCorNB").

print.betanb

---

*Print Method for an Object of Class betanb*

---

**Description**

Print Method for an Object of Class betanb

**Usage**

```

## S3 method for class 'betanb'
print(x, alpha = c(0.05, 0.01, 0.001), type = "pc", digits = 4, ...)

```

**Arguments**

x	Object of Class betanb, that is, the output of the BetaNB(), RSqNB(), SCorNB(), DeltaRSqNB(), PCorNB(), or DiffBetaNB() functions.
alpha	Significance level.
type	Charater string. Confidence interval type, that is, type = "pc" for percentile; type = "bc" for bias corrected; type = "bca" for bias corrected and accelerated.
digits	Digits to print.
...	additional arguments.

**Value**

Prints a matrix of estimates, standard errors, number of bootstrap replications, and confidence intervals.

**Author(s)**

Ivan Jacob Agaloos Pesigan

---

print.nb

*Print Method for an Object of Class nb*

---

**Description**

Print Method for an Object of Class nb

**Usage**

```
## S3 method for class 'nb'  
print(x, ...)
```

**Arguments**

x	Object of Class nb.
...	additional arguments.

**Value**

Prints the first six bootstrap covariance matrices.

**Author(s)**

Ivan Jacob Agaloos Pesigan

**Examples**

```
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)  
nb <- NB(object, R = 100)  
print(nb)
```

---

RSqNB	<i>Estimate Multiple Correlation Coefficients (R-Squared and Adjusted R-Squared) and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping</i>
-------	---

---

## Description

Estimate Multiple Correlation Coefficients (R-Squared and Adjusted R-Squared) and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping

## Usage

```
RSqNB(object, alpha = c(0.05, 0.01, 0.001))
```

## Arguments

<b>object</b>	Object of class nb, that is, the output of the NB() function.
<b>alpha</b>	Numeric vector. Significance level $\alpha$ .

## Details

R-squared ( $R^2$ ) and adjusted R-squared ( $\bar{R}^2$ ) is estimated from bootstrap samples. Confidence intervals are generated by obtaining percentiles corresponding to  $100(1 - \alpha)\%$  from the generated sampling distribution of  $R^2$  and  $\bar{R}^2$ , where  $\alpha$  is the significance level.

## Value

Returns an object of class betanb which is a list with the following elements:

- call** Function call.
- args** Function arguments.
- thetahatstar** Sampling distribution of  $R^2$  and  $\bar{R}^2$ .
- vcov** Sampling variance-covariance matrix of  $R^2$  and  $\bar{R}^2$ .
- est** Vector of estimated  $R^2$  and  $\bar{R}^2$ .
- fun** Function used ("RSqNB").

## Author(s)

Ivan Jacob Agaloos Pesigan

## See Also

```
# Data -----
data("nas1982", package = "betaNB")

# Fit Model in lm -----
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)

# NB -----
nb <- NB(
  object,
  R = 100, # use a large value e.g., 5000L for actual research
  seed = 0508
)

# RSqNB -----
out <- RSqNB(nb, alpha = 0.05)

## Methods -----
print(out)
summary(out)
coef(out)
vcov(out)
confint(out, level = 0.95)
```

---

SCorNB

*Estimate Semipartial Correlation Coefficients and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping*

---

## Description

Estimate Semipartial Correlation Coefficients and Generate the Corresponding Sampling Distribution Using Nonparametric Bootstrapping

## Usage

```
SCorNB(object, alpha = c(0.05, 0.01, 0.001))
```

## Arguments

object	Object of class nb, that is, the output of the NB() function.
alpha	Numeric vector. Significance level $\alpha$ .

## Details

The vector of semipartial correlation coefficients ( $r_s$ ) is estimated from bootstrap samples. Confidence intervals are generated by obtaining percentiles corresponding to  $100(1 - \alpha)\%$  from the generated sampling distribution of  $r_s$ , where  $\alpha$  is the significance level.

**Value**

Returns an object of class `betanb` which is a list with the following elements:

**call** Function call.

**args** Function arguments.

**thetahatstar** Sampling distribution of  $r_s$ .

**vcov** Sampling variance-covariance matrix of  $r_s$ .

**est** Vector of estimated  $r_s$ .

**fun** Function used ("SCorNB").

**Author(s)**

Ivan Jacob Agaloos Pesigan

```
# Data -----
data("nas1982", package = "betanb")

# Fit Model in lm -----
object <- lm(QUALITY ~ NARTIC + PCTGRT + PCTSUPP, data = nas1982)

# NB -----
nb <- NB(
  object,
  R = 100, # use a large value e.g., 5000L for actual research
  seed = 0508
)

# SCorNB -----
out <- SCorNB(nb, alpha = 0.05)

## Methods -----
print(out)
summary(out)
coef(out)
vcov(out)
confint(out, level = 0.95)
```

---

summary.betanb	<i>Summary Method for an Object of Class betanb</i>
----------------	---

---

**Description**

Summary Method for an Object of Class betanb

**Usage**

```
## S3 method for class 'betanb'
summary(object, alpha = c(0.05, 0.01, 0.001), type = "pc", digits = 4, ...)
```

**Arguments**

object	Object of Class betanb, that is, the output of the BetaNB(), RSqNB(), SCorNB(), DeltaRSqNB(), PCorNB(), or DiffBetaNB() functions.
alpha	Significance level.
type	Charater string. Confidence interval type, that is, type = "pc" for percentile; type = "bc" for bias corrected; type = "bca" for bias corrected and accelerated.
digits	Digits to print.
...	additional arguments.

**Value**

Returns a matrix of estimates, standard errors, number of bootstrap replications, and confidence intervals.

**Author(s)**

Ivan Jacob Agaloos Pesigan

---

vcov.betanb	<i>Sampling Variance-Covariance Matrix Method for an Object of Class betanb</i>
-------------	---

---

**Description**

Sampling Variance-Covariance Matrix Method for an Object of Class betanb

**Usage**

```
## S3 method for class 'betanb'
vcov(object, ...)
```

**Arguments**

<code>object</code>	Object of Class <code>betanb</code> , that is, the output of the <code>BetaNB()</code> , <code>RSqNB()</code> , <code>SCorNB()</code> , <code>DeltaRSqNB()</code> , <code>PCorNB()</code> , or <code>DiffBetaNB()</code> functions.
<code>...</code>	additional arguments.

**Value**

Returns the variance-covariance matrix of estimates.

**Author(s)**

Ivan Jacob Agaloos Pesigan
